Graphing in Stata

Ista Zahn

Harvard MIT Data Center

January 25 2013

The Institute
for **Quantitative Social Science**
at Harvard University

Outline

1 Introduction

Topic
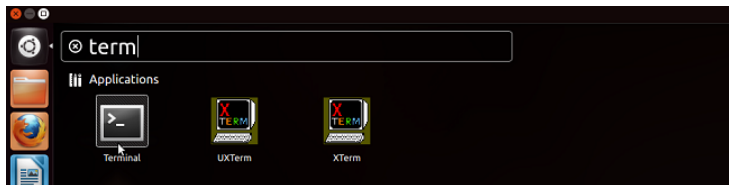

Organization

- Please feel free to ask questions at any point if they are relevant to the current topic (or if you are lost!)
- There will be a Q&A after class for more specific, personalized questions
- Collaboration with your neighbors is encouraged
- If you are using a laptop, you will need to adjust paths accordingly
- Make comments in your Do-file rather than on hand-outs
- Save on flash drive or email to yourself

Copy the workshop materials to your home directory

- **Log in to an Athena workstation** using your Athena user name and password
- **Click on the "Ubuntu" button** on the upper-left and type "term" as shown below

- **Click on the "Terminal" icon** as shown above
- In the terminal, **type this line exactly as shown**:

```
cd; wget http://tinyurl.com/stata-graphics-zip; unzip stata-graphics-zip
```

- If you see "ERROR 404: Not Found", then you mistyped the command – try again, making sure to type the command exactly as shown

Launch Stata on Athena

- To start Stata **type these commands in the terminal**:

  add stata
  xstata

- Open up today's Stata script
  - In Stata, go to **Window => New do file => Open**
  - Locate and open the StatGraphics.do script in the StataStatistics folder in your home directory
- I encourage you to add your own notes to this file!
